Trans. of Akademiya Nauk USSR Div. Metall.
Metallofizika (Sbornik Nauchnykh Rabot) 1955, v. 6,
p. 85-91

An analysis is made of diffusion plasticity based upon
the diffusion-deformation resistance relationship at
high temperatures. A determination is made of con-
ditions corresponding to maximum strength of a solid
solution at temperatures at which rates of diffusion
are significant, specifically, when melting tempera-
ture decreases with concentration of the secondary
alloying element. At high temperatures the composi-
tion of an alloy shifts with temperature increase in
the direction of the solvent.

Trippel, A. I.
QUALITATIVE DETERMINATION OF HIGHER
FATTY ACIDS BY PAPER CHROMATOGRAPHY IN
ONE DIMENSION. 6p. 33 refs.
Order from SLA \$1.10

61-20496

Trans. of Institut Sovetskoi Torgovli. Sbornik
Nauchnykh Rabot (USSR) 1959, v. 13, p. 133-138.

DESCRIPTORS: *Fatty acids, Determination.
*Chromatographic analysis.

The paper chromatographic method proposed by
N. P. Krufman was found to be suitable for separation
of higher fatty acids from C₁₀ to C₁₈, but was un-
suitable for fatty acids lower than C₁₀, due to solu-
bility of copper salts of lower fatty acids, which
makes it impossible to render the spots visible by
means of potassium ferrocyanide. The paper
